

Jacktripp session with Elie notes

terminal, type "ifconfig" to show IP addresses

on mac, go to system preferences, networks

public IP address - unique, visible, ping

private is not unique, always begging with one of two combos

start server to wait for message/call

start client (doesn't wait)

START by generating server (qjackctl &) sampling rate 48000

jacktrip -s (as opposed to -c)

start client with the IP address of the server

jjacktrip -c IP address

control C to stop something

cannot serve both purposes at the same time

jack

go to connect

left column is input. right column is output

have an external mic to talk to the person

in increase number of channels sent/received add "-n4" after "-s"

communication is bidirectional

coordinate with the other person!! to have

same sampling rate 48000

same frames per period 256

same number of channels 4

128 is ideal frames per second size

don't wait too long or too little

default queue is 4

decrease to 3 or 2

on mixer, press "direct" to send to computer, can assign tracks to speakers in room, make sure phantom power is on, fader is on

HDSPMixer& under sound and video in terminal

27 is first output
